# SAIL – A Scalable AI Lifecycle Framework for Coordinated AI Adoption in Software Organizations

## Overview

This repository contains the materials for a Master's thesis focused on developing and evaluating SAIL, a structured framework designed to enable software organizations to adopt Artificial Intelligence (AI) in a coordinated, scalable, and reusable manner.

## Purpose

The thesis aims to address the lack of integrated, use-case-driven frameworks for scalable AI adoption across software teams. SAIL provides practical guidelines for use case mapping, staged implementation (Awareness → Pilot → Scale → AI-Native), governance, and cross-team reuse.

## Structure

- **thesis.md**: Main thesis document, including abstract, chapters, references, and appendices.
- **proposal.md**: Research proposal and outline.
- **.copilot.md**: Writing guidelines and instructions for thesis development.

## Key Concepts

- **Research Question**: How should AI adoption in software organizations be structured to ensure scalability, coordination, and reusability across diverse use cases?
- **Theoretical Lenses**: Enterprise Architecture, Digital Transformation, Innovation Diffusion, Dynamic Capabilities, Resource-Based View.
- **Methodology**: Design Science Research with conceptual framework development and use case walkthroughs.

PROF

## How to Use

- Review `thesis.md` for the full thesis draft and structure.
- Refer to `proposal.md` for the research outline and objectives.
- Consult `.copilot.md` for writing standards and requirements.

# Table of Contents

1. **Introduction**
   1.1 Background
   1.2 Problem Statement
   1.3 Research Gap
   1.4 Research Question and Objectives
   1.5 Structure of the Thesis

2. **Literature Review**
   2.1 Enterprise Architecture and AI Integration [REF]
   2.2 Digital Transformation and Organizational Readiness [REF]
   2.3 Innovation Diffusion Theory [REF]
   2.4 Dynamic Capabilities [REF]
   2.5 Resource-Based View (RBV) and AI Assets [REF]
   2.6 Related AI Adoption Models [REF]
   2.7 Synthesis and Identified Gaps

3. **Theoretical Framework**
   3.1 Conceptual Foundations of SAIL
   3.2 Integration of Theoretical Lenses
   3.3 Principles Derived for Framework Design

4. **Research Methodology**
   4.1 Research Design – Design Science Research
   4.2 Literature Review Approach
   4.3 Framework Development Process
   4.4 Conceptual Evaluation via Use Cases
   4.5 Limitations

5. **Framework Development (SAIL)**
   5.1 Overview of SAIL Framework
   5.2 Adoption Stages (Awareness → Pilot → Scale → AI-Native)
   5.3 Governance and Roles
   5.4 Use Case Mapping & Prioritization
   5.5 Evaluation and Reuse Mechanisms

6. **Use Case Walkthroughs**
   6.1 Code Generation
   6.2 Documentation Automation
   6.3 Sprint Planning
   6.4 Cross-Case Insights

PROF

7. **Discussion**
   7.1 Theoretical Contributions
   7.2 Practical Implications for Software Organizations
   7.3 Comparison with Existing Models
   7.4 Challenges and Limitations

8. **Conclusion & Future Work**
   8.1 Summary of Findings
   8.2 Contributions to Theory and Practice
   8.3 Future Research Directions
   8.4 Final Reflection

**References**
